Exercise (Part 1)

1. Create a DataFrame by reading in the 2019_Yellow_Taxi_Trip_Data.csv file. Examine the first 5 rows.
2. Find the dimensions (number of rows and number of columns) in the data.3. Using the data in the 2019_Yellow_Taxi_Trip_Data.csv file, calculate summary statistics for the fare_amount, tip_amount, tolls_amount, and total_amount columns4. . Isolate the fare_amount, tip_amount, tolls_amount, and total_amount for the longest trip by distance (trip_distance).

In [108…
```
#1
import pandas as pd
trip_data = pd.read_csv('2019_Yellow_Taxi_Trip_Data.csv', nrows=5)

trip_data
```
